Internship Report – Day 7

Date: 11/05/2025

Name: C H Uday Kumar

Roll.no: BU22CSEN0300538

Internship Program: ParkNSecure – Smart Parking Solutions

Day 7 Overview:

Tools Used Today:

Today, I worked on my ANPR project where I selected a suitable dataset for number plate detection using Roboflow. After choosing the dataset, I forked it to create my own version so I could modify and train it without affecting the original. Once that was done, I started training the model using Roboflow Train, and it's currently in progress. This step includes preprocessing and model building handled by Roboflow. Once the training finishes, I'll test the model and move on to integrating OCR for reading the number plates.

VS CODER, GEMINI, SONNET, ROboflow, Chatgpt.

Task Given:

TO CREATE THE ANPR MODEL TO DETECT THE LETTERS AND NUMBERS PRESENT IN THE VECHILES NUMBERPLATES.

The ANPR system development began with selecting and preparing a suitable dataset for Indian vehicle number plate detection using Roboflow. A public dataset was forked to create a personalized copy, enabling customization and safe experimentation. Roboflow's built-in tools were used for preprocessing, annotation management, and initiating model training through Roboflow Train. The training process is currently ongoing and leverages cloud-based training to build a robust detection model. This approach ensures a streamlined pipeline from data preparation to model training, laying the foundation for integrating OCR and real-time inference in the next phases of the project.
