

Internship Report – Day 13

Date: 17/05/2025

Name: C H Uday Kumar

Roll.no: BU22CSEN0300538

Internship Program: ParkNSecure – Smart Parking Solutions

Day 13 Overview:

After training the model for the 3 days I have stopped it today to check the accuracy and I have implemented a new python code to test the model .

I also got the best.pt and last.pt models after training for the 3 days .

I have tested the model today with the different approach .

Today while testing I am facing the problems with my laptop because the path for the python is not clear so the terminal is not recognizing the command python so I am trying many methods but still not solved the issue.

Tools Used Today

GEMINI, SONNET, Chatgpt, vs coder, cmd terminal,trae.

Task Given:

TO CREATE THE ANPR MODEL TO DETECT THE LETTERS AND NUMBERS PRESENT IN THE VECHILES NUMBERPLATES.

Approaches:-

I have used the yolov8n model and yolov8s models in project . And I have also used the utils for the clarification of the numbers and characters in the numberplate .

Taken the help form chatgpt to sole the command line issue.

Attachments:-

```
# Load prebooked plates
with open("prebooked_plates.txt", "r") as f:
    prebooked = set(line.strip() for line in f if line.strip())
print(f"Loaded {len(prebooked)} prebooked plates")

try:
    with open("prebooked_plates.txt", "r") as f:
        prebooked = set(line.strip() for line in f if line.strip())
        print(f"Loaded {len(prebooked)} prebooked plates")
except FileNotFoundError:
    print("Warning: prebooked_plates.txt not found. Creating empty file.")
    with open("prebooked_plates.txt", "w") as f:
        pass
    prebooked = set()

# Create directory for saving plates
if not os.path.exists(SAVE_PATH):
    # 35 hidden lines

    # Run Inference
    results = model(frame, conf=CONFIDENCE_THRESHOLD, verbose=False)

    # Process results
    for result in results:
        boxes = result.boxes

    # Process results: results[0] contains the first image's predictions
    if len(results) > 0:
        # Get the boxes for the first (and only) image
        boxes = results[0].boxes

    # Check if any boxes were detected
    if len(boxes) > 0:
        for box in boxes:
            # Get coordinates (ensure they are integers)

if __name__ == "__main__":
    print("\n=== YOLOv8 License Plate Recognition System ===\n")
    detect_and_recognize_plates()
```

```
setup_and_run.bat
1  @echo off
2  echo Setting up ANPR environment...
3
4  :: Check if Python is installed
5  where python >nul 2>nul
6  if %ERRORLEVEL% NEQ 0 (
7      echo Python is not installed or not in PATH.
8      echo Please install Python 3.8 or later from https://www.python.org/downloads/
9      echo Make sure to check "Add Python to PATH" during installation.
10     pause
11     exit /b 1
12 )
13
14 :: Check Python version
15 python --version
16 echo.
17
18 :: Create virtual environment if it doesn't exist
19 if not exist "venv" (
20     echo Creating virtual environment...
21     python -m venv venv
22 )
23
24 :: Activate virtual environment
25 echo Activating virtual environment...
26 call venv\Scripts\activate
27
28 :: Install requirements
29 echo Installing requirements...
30 pip install -r requirements.txt
31 pip install easyocr
32
33 :: Run the script
34 echo.
35 echo Running ANPR script...
36 python simple_anpr.py
37
38 :: Deactivate virtual environment
39 call venv\Scripts\deactivate
40
41 pause
```

After trying many time I have even tried the setup method to get access the python directly form the vs coder but it still not working properly .

I am still trying to solve this issue.
