

Internship Report – Day 14

Date: 18/05/2025

Name: C H Uday Kumar

Roll.no: BU22CSEN0300538

Internship Program: ParkNSecure – Smart Parking Solutions

Day 14 Overview:

After training the model for the 3 days I have stopped it today to check the accuracy and I have implemented a new python code to test the model .

I also got the best.pt and last.pt models after training for the 3 days .

I have tested the model today with the modified python code which exactly takes and loads the model I have trained.

Tools Used Today

GEMINI, SONNET, Chatgpt, vs coder, cmd terminal,trae.

Task Given:

TO CREATE THE ANPR MODEL TO DETECT THE LETTERS AND NUMBERS PRESENT IN THE VEHICLES NUMBERPLATES.

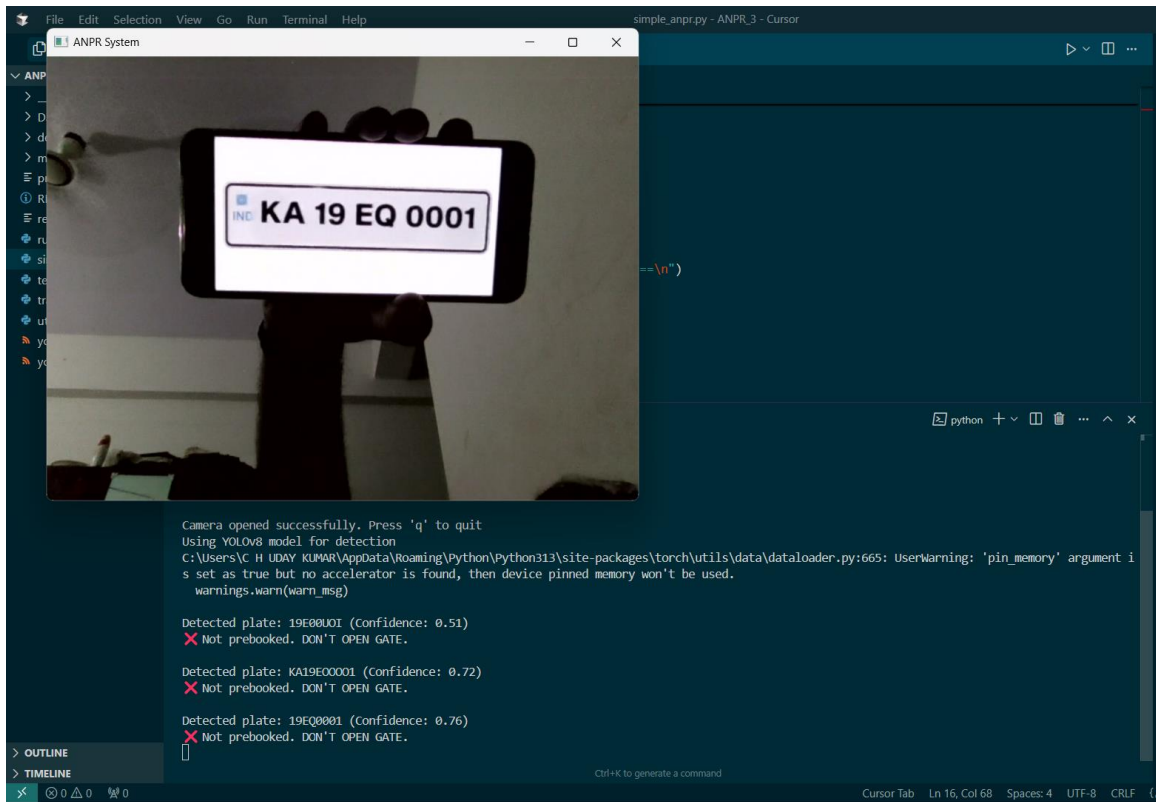

Approaches:-

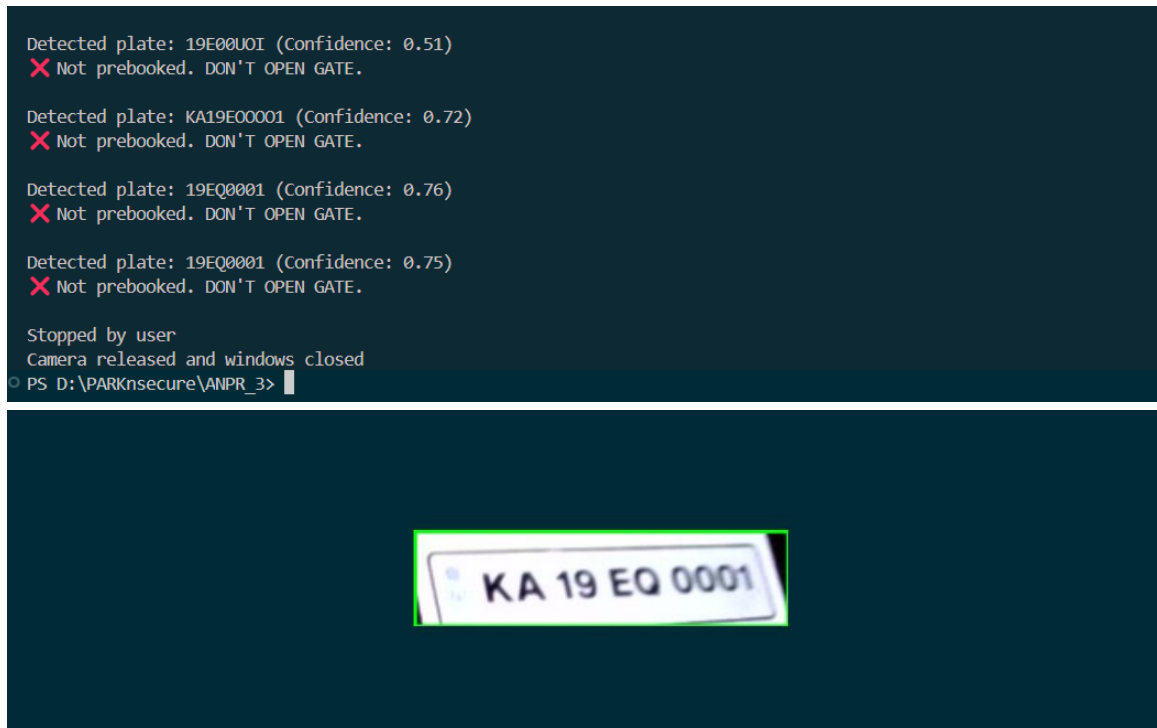

I have used the yolov8n model and yolov8s models in project . And I have also used the utils for the clarification of the numbers and characters in the numberplate .

Taken the help from chatgpt to solve the command line issue.

And also solved the issue of installing the python 3.13.3 version to run the model perfectly.

Attachments:-

**Still the model is not working with the complete accuracy .
it is still facing the issue to detect the complete number
plate.**
